

Integration: Applications

Introduction to Engineering Mathematics

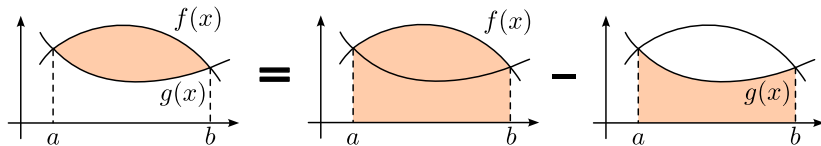

Prof. Joris Vankerschaver

Reminder: area under the curve

$$\text{Area} = \int_a^{c_1} f(x)dx - \int_{c_1}^{c_2} f(x)dx + \int_{c_2}^b f(x)dx.$$

Area between two curves

Recipe for finding the area

- 1 Make a figure
- 2 Determine intersection points
- 3 Figure out which curve is upper/lower
- 4 Integrate

Example

Find the area bounded by $y = \sin x$, $y = 0$, and $x = \frac{3\pi}{2}$.

Example

Find the area of the region between the curves $y = x^2 - 2x$ and $y = 4 - x^2$.

Example

Find the area of the region between $x = 12 - y^2$ and $y = -x$.
